Timberhouse Corner

One Time Every Year

Every year David Gevers takes apart the three airplanes housed in the hangar at Timberhouse. This is called an Annual. David Gevers has an A&P license, or Airframe and Powerplant license. The FAA requires the Annual every year. In the summer planes fly in so that David Gevers can do the Annual. *Rebekah Lumkes*

Animal Corner

Hunters of the House

Bunny and Tiger (the cats) are having a great time hunting birds at the Lumkes' bird feeder. They haven't caught one yet, but very soon they probably will. Whenever a bird flies into the window Bunny and Tiger find it and use their paws to bounce it around. Then feathers fly everywhere at once. *Rebekah Lumkes*

Wildlife Corner

Pileated Woodpeckers

There is a family of pileated woodpeckers living at Timberhouse Aero Estates, and if you are quiet and look around you might see one. We finally saw one outside our back window. Here are some facts about them:

- Diet- Insects, nuts and berries
- Height- 15 inches long
- Habitat- Coniferous and deciduous forests
- Young- Up to 4, hatch in two weeks and fledge in about a month

Plane Being Built

The Lumkes' got a kit a couple of years ago for a Zenith airplane. With David and Ron helping them the plane is being built. When Dad is ready we help take out clecos and rivet the pieces together. *Lumkes Children*

RC Corner

RC Fliers Make Rare Appearance

December was cold; January was warmer, but apparently not warm enough, for the RC fliers made it out only once. We expect to see them more as the weather warms up. *Lumkes Children*
